

## PROJECT PROFILE

### Sport Honda

“We liked the Koreteck system. Due to the special needs of a motorcycle dealership such as overhead doors, we had to work out some details with the contractor, but we wouldn’t hesitate to use Koreteck again. It is especially well suited for some of the retail projects we design.”

David Urffer, AIA  
J.K. Roller Architects

Project:  
Sport Honda  
Metuchen, New Jersey

General Contractor:  
Largo Construction  
Bensalem, Pennsylvania

End Use:  
Motorcycle Dealership

**Objective:** To build a economical dealership that would be energy-efficient but allow for flexibility in architectural details.

**Scope of Services:** Fabrication by Koreteck™ with design by J.K. Roller Architects and construction by general contractor Largo Construction.

**Features:** The 17,000-square-foot facility features the Koreteck panels, which are enhanced by accent bands and an integrated glass curtain wall system. The Koreteck Panelized Building System is designed to assure ease of installation and provide exterior finish flexibility. The system has been independently tested for structural, fire, vapor and sound transmission characteristics.

**Systems Used:** Structure: Conventional structural steel system / Walls: 8-inch Koreteck Panelized Building System / Exterior Finish: Acrylic surfacing system

**Performance:** The contractor reported that the project was very economical due to the labor savings that resulted from the quick installation of the Koreteck system.

**Architect:** J.K. Roller Architects, Philadelphia, Pennsylvania
